

PAG FREELANCER

Low-cost, all-chemistry PAGlok charger

The PAG Freelancer is a new ultra-compact and economical 2-channel charger. It has a tough but lightweight moulded-construction which makes it an ideal travel or back-up charger.

Compact and Lightweight

The PAG Freelancer is only slightly larger than a PAG L95 Li-Ion battery, and fits easily into your camera bag.

All-Chemistry

The all-chemistry Freelancer incorporates two full-sized PAGlok connectors and will sequentially charge all PAGlok batteries.

Extended Battery Life

The Freelancer features PAG ACS software which will extend the cycle life of your batteries beyond anything that can be achieved using other systems. A fully discharged 5Ah battery will be fully-charged in approximately 3 hours 20 minutes. After charging, the Freelancer may apply a balancing charge, and a maintenance charge to keep the battery in peak condition.

Recovery Charge

The Freelancer incorporates a Recovery Charge program for PAG Li-Ion batteries that will automatically recover the battery when the output has been shut down by the internal protection circuit.

User Interface

The charger's user interface features a comprehensive LED indication of battery and charger status. The charger is fully automatic in operation and constantly monitors every process.

Charge Adaptor

A charge adaptor which enables the Freelancer to charge NP1 batteries is also available (Model 9574).

Worldwide

The Freelancer can be powered from almost any AC power supply, worldwide, or from a vehicle battery with the PAG Vehicle Battery Power Converter (Model 9774).

Specifications

PAG Freelancer Charger
Model No. 9613

Battery Connections:
2 x PAGlok Connectors (no PP90 sockets).

Charging Range:
12 to 14.8V, 1.5 to 10A.

Overall Dimensions:
133mm high x 112mm wide x 53mm deep.
(5.25" x 4.4" x 2.0" approx.).

Weight:
434g (1.0lb approx.).
