

# PAG FIRESTORE BRACKET

For use with the JVC GY-HD100 Camcorder

**PAG has designed a mounting bracket, for use with the Firestore DR-HD100 disc storage device, specifically to suit the JVC HD100 camcorder.**

The Firestore bracket is used in association with PAGlok Power Adaptor Model 9522/75, a battery mount that incorporates a built-in DC Adaptor which enables the camcorder to be powered via 12V to 14.8V professional PAGlok batteries. This unit allows the cradle for the DR-HD100 to be positioned in the convenient area between the camcorder handle and the battery. This unique mounting position ensures that the HD100 remains perfectly balanced.

The Firestore device is situated within the existing outline of the camera, resulting in a particularly compact installation, and allows the camera operator to view the display without taking the lens away from the subject.

The bracket is fitted between the existing earpiece mounting points and the PAGlok Power Adaptor, and makes use of the cradle which is provided with the DR-HD100. All necessary fittings are included, and the PAGlok Power Adaptor features a power feed specifically for the Firestore device.
