Longer-Lasting Lithium

PAG, the camera power and lighting specialist, has increased the warranty on its L95 Li-Ion ENG camera batteries to two years. The improved warranty has also been extended to include L95s that are already in the field.

PAG is able to offer this extended warranty as a result of the L95's exemplary performance record. After two years active service the 14.8V 6.5Ah 95Wh battery has shown little reduction in available capacity. The many levels of protection built into the L95 prevent the damaging processes that reduce capacity; this, combined with proprietary charging techniques, ensures a longer battery cycle life. The quality standard and performance of the L95 is further supported by UN Air Transport Certification.

The two year warranty applies to all L95 models, regardless of battery connector system. PAG currently offers Li-Ion solutions for the three major battery mounting systems: V-Mount, Anton-Bauer, and PAGlok.

The L95 is available incorporating a choice of capacity indicators. The L95 Time Battery has a built-in Power & Time Display which shows a countdown of remaining run-time, expressed in one minute increments. It also shows available capacity in Ah and as a percentage. The L95 Power Circle Battery incorporates a 4 segment electronic indicator of available battery capacity. This high-quality, lower-cost option incorporates the same cell-pack, safety features and cycle life as the premier Li-Ion option but at a significantly reduced cost.
