

Another success for PAG's lighting design team

Choose from the world's best camera lights...

Paglight
The original halogen or arc 12V broadcast camera light. Features detachable power base. Still the most versatile light in the industry (**Page 18**).

Reflector: 45mm dia.

Paglight M
Miniaturised version of the 12V Paglight for use with smaller digital camcorders. Features detachable power base (**Page 22**).

Reflector: 35mm dia.

Paglight C6 DV Kit
An all-inclusive 6V lighting kit, incorporating 6V battery and charger, designed for use with small camcorders (**see PAG DV Solutions Book**).

Reflector: 35mm dia.

Paglight L
A 250W hand-held location fill-light or 'basher' available in 24V and 30V models (**Page 24**).

Reflector: 60mm dia.

Designed and developed at our own London research laboratory, Paglights are the ultimate in camera lighting.

The original 12V Paglight was the first on-board camera light designed specifically to meet the requirements of the broadcast industry. PAG now offers a family of lights, designed to fulfil a variety of professional requirements, but sharing many of the unique features that made Paglight the industry standard.

Paglights are robust, light in weight, cool-running and fully-focusable. Their versatility has been achieved as a result of PAG's patented plug-in lampholder feature. This is best illustrated in the original 12V professional **Paglight** which is both a halogen and a metal-halide arc light. Plug-in lampholder options for this light also include Softstart, for use with Li-Ion batteries, and the power-saving, regulated PowerMax unit, which incorporates a dimming facility called VariLux (**see Page 18**).

Paglight M was introduced to suit the dimensions of the smaller, digital camcorders. This miniaturised version of the 12V Paglight

can be powered from a range of 12V to 14.8V battery packs and belts, and is available with a choice of detachable power bases, as well as a Softstart lampholder option (**see Page 22**).

For small camcorder users, whether professional or consumer, the **Paglight C6 DV Lighting Kit** is an ideal solution. This self-contained, broadcast quality 6V system provides everything you need - Paglight, diffuser, dichroic, barndoors, battery and charger at a price to suit *any* equipment budget (**see PAG DV Solutions Book**).

Paglight L is a 250W 'basher' or fill-light, available in 24V and 30V models. It is the perfect hand-held location light with many features of PAG's original on-board camera light: quick and easy lamp-changing, detachable power base and a range of accessories (**see Page 24**).
