

Paglight. The world's most versatile camera light.

Plug-in PowerArc

Detachable power base

Paglight is a revolutionary camera light, the first specifically designed to suit professional ENG/EFP requirements, and answer the many requests for an all-embracing, single operator camera light.

PAG's unique patented design makes Paglight the coolest running and most versatile camera light in the industry. Interchangeable plug-in lamp holders fit into the back of the lamp body. Variants of wattage and unit type can be exchanged without handling the lamp.

There are four lamp holder options, three of which accept standard bi-pin halogen lamps.

Standard Lamp Holder
Accepts 20W, 35W, 50W, 75W and 100W halogen lamps.

Softstart Lamp Holder
Prevents the cold lamp start-up surge from activating the over-current protection circuits within Li-Ion batteries. (Not required when using the lamp output on a Sony camera).

PowerMax Control/VariLux
A voltage regulated unit that prolongs battery run-time and saves lamp filament life. VariLux is a lamp

dimming facility which also conserves battery power.

PowerArc
Paglight can be instantly converted to HMI by plugging in the PowerArc unit. The arc lamp consumes only 24W but provides the equivalent of 100W of daylight output. The ability to convert from halogen to HMI makes the Paglight the industry's most versatile camera light.

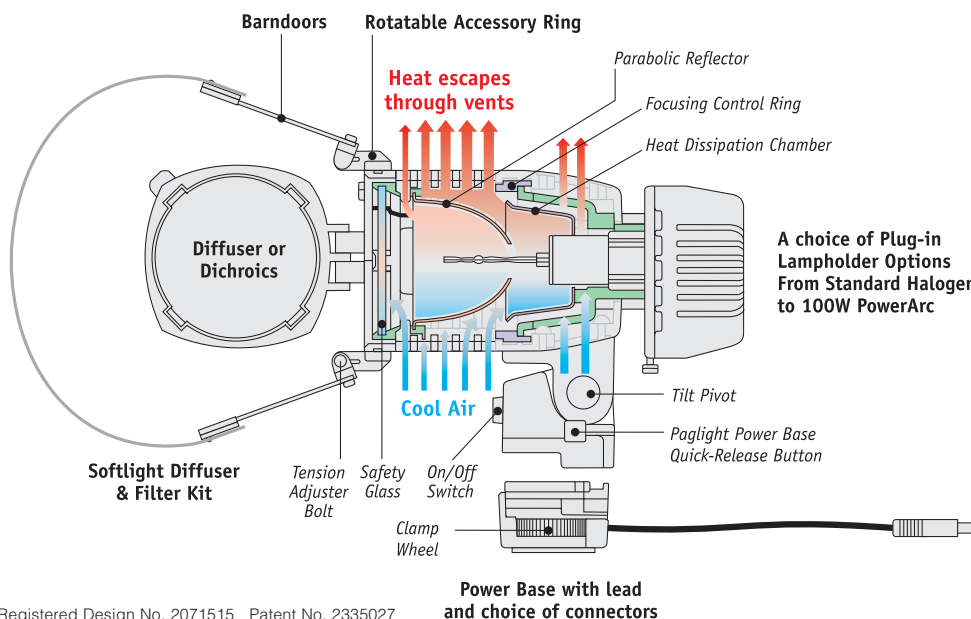

Fully Focusable
Paglight is continuously focusable with a beam angle that is variable

from spot to flood. It has a soft, even spectral distribution

Rotatable Accessory Kit
This accessory holding ring holds any combination of snap-in barn doors (tapered or parallel), dichroic filters or diffuser and can be fitted to the front of the light. The assembly can be rotated easily to give the desired configuration.

Paglight is the coolest running light in the business

Softlight Diffuser & Filter Kit
This filter holding assembly fits onto the barndoors and enables you to create supersoft lighting with a variety of effects with colour filters.

Paglight Power Bases
Low-profile, pre-wired, hot-shoe power bases enable the Paglight to be easily and quickly mounted to, or removed from the camera. Power bases are available with a variety of connectors, such as PP90, XLR-4, Snap-on or SX (D-Tap) and a variety of lead lengths, suitable for use with most professional cameras and power sources.
