

# Paglight. The world's most versatile camera light.

## Halogen, HMI or LED - Paglight does it all.

### Revolutionary by Design

Paglight is a revolutionary camera light, the first specifically designed to suit professional ENG/EFP requirements, and answer the many requests for an all-embracing, single operator camera light.

### Fully Focusable

Paglight is continuously focusable with a beam angle that is variable from spot to flood. It has a soft, even spectral distribution with no hot spots or flaws.

### Cool and Versatile

PAG's unique patented design makes Paglight the coolest running and most versatile camera light in the industry. Interchangeable plug-in lamp holders fit into the back of the lamp body. Variants of wattage and unit type can be exchanged without handling the lamp. There are five lamp holder options available.

### Standard Lamp Holder

Accepts 20W, 35W, 50W, 75W and 100W tungsten halogen bi-pin lamps.

### Softstart

A halogen lamp holder that prevents the cold lamp start-up surge from activating the over-current protection circuits within

Li-Ion batteries. (This is not required when using the lamp output on a Sony camera).

### PowerMax Control/VariLux

A voltage regulated unit that prolongs battery run-time and saves lamp filament life. VariLux is a lamp dimming facility which also conserves battery power.

### PowerArc

Paglight can be instantly converted to HMI by plugging in the PowerArc unit. The arc lamp consumes only 24W but provides the equivalent of almost 100W, but at daylight colour temperature.

### LED Dimmer

The highly energy efficient plug-in LED module consumes only 11W, greatly extending battery run-time. The LED Dimmer Unit has a colour temperature that matches daylight and an output of 850 lux at 2m. The LED Unit's dimming facility enables you to control light intensity; Paglight's spot and flood capability can also be used.

### Rotatable Accessory Kit

This accessory ring holds any combination of snap-in accessories, including barn doors (tapered or parallel), dichroic filters that correct the colour temperature of the light output and a diffuser. The accessory ring can be expanded to fit over the front of the light, rotated to achieve the desired configuration, and then tightened to maintain its position.

### Softlight Diffuser & Filter Kit

This filter holding assembly fits onto the barn doors and enables you to attach a supersoft light diffuser or colour correction filters.

### Paglight Power Bases

Low-profile, hot-shoe Power Bases enable the Paglight to be easily and quickly mounted to the camera, or removed after shooting. Power Bases are available with a choice of connector, such as PP90, XLR-4, and D-Tap (SX & Snap-on), and various lead lengths suitable for use with most cameras. The base allows the Paglight to be mounted to the camera via a variety of universal mounting options (see Page 28).
